HANDMAKE

手绘

High grade pigments, rare frits and precious metals such as gold and platinum are applied to the surface of rock slab by using tools such as spatula, brush, sponge and chisel in a purely manual way.

以纯手工的方式，利用抹刀、毛刷、海绵、圆凿等工具，将高级颜料、珍稀熔块和黄金、铂金等贵金属应用于岩板表面。

DIGITAL

数码彩绘

Printing of decorations with digital files using colored inks, gold or platinum.

使用彩色墨水、黄金和铂金进行数字化印刷装饰。

SCREEN PRINTING

丝网彩印

Full field printing of total color (le tinte unite) or decorations with textures and layers plus pouring of grits of glass.

所有颜色全丝网印刷（色彩系列）或着通过纹理装饰、工艺叠加玻璃熔块。

“

光，不再是被动地照耀，而是赋予石材灵魂的媒介。

Light is no longer a passive illuminator, but the very breath of stone.

Light

THE SOUL OF STONE AWAKENED

光

【让奢石焕发灵魂】

当光线轻抚其表面，折射出温润细腻的光感，冷硬的岩层被赋予柔性，刚毅中流露温润质感，塑造出光影流转的诗意画卷。

As rays caress its surface, they evoke a tender, nuanced glow, softening the immutable rock with supple radiance. Strength tempers to tenderness, creating a canvas where light and shadow waltz in poetic harmony.

“

每一寸肌理，都承载着大地亿万年的沉淀。

Every inch of texture carries the weight of the earth's millennia-long sedimentation.

Texture

A CHRONICLE OF TIME

纹

【承载时间的诗篇】

通过精准至0.01毫米的釉层落差，细腻刻画地壳运动的史诗，复刻自然鬼斧神工的肌理，让石材不仅是建筑材料，更成为时间与空间的对话者。

Through precise glaze variations, accurate to 0.01mm, we meticulously depict the epic movements of the earth's crust, replicating nature's miraculous textures. Stone becomes not just a building material but a conduit for dialogue between time and space.

“

指尖触及的一刻，细腻而富有层次的肌理跃然于感官之上。

At the touch of a fingertip, a delicate and layered texture leaps to life.

Touch

INFUSING SPACE WITH WARMTH

触

【赋予空间的温度】

轻柔、透亮、润泽每一种工艺细节，都经匠心雕琢，使冰冷的奢石绽放出温暖的人文气息，让空间在感知中流动。

Every crafted detail – gentle, luminous, and smooth – is carefully sculpted, allowing cold luxury stone to radiate a warm, humanistic aura, and allowing space to flow through perception.

TILES IN OUR LIFE

- why do you choose us?

to take on all of these challenges

We have always invested in **product innovation**

Our daily commitment to reducing our **environmental impact**

High standards in color yield and whiteness

GLOBAL PARTNERS

WE DESIGN SURFACES

Founded in 1984 in Sassuolo by CEO Mr Maurizio Cavagnari, Stylgraph is a leading Company in the surfaces design field, with more than 35 years of experience as partner of the most important flooring and wallcovering companies in the world.

In the trend of design and fashion vane, Stylgraph can always define "popular". By controlling the fashion trend of global tiles and researching the latest design and technology, Stylgraph integrates the world's leading design concepts into the multicultural product designs, with a new perspective and exclusive creativity, reinventing the definition of the fashion trend, creating the unique product imprint of the brand.

Top Italian original design

Italian elite design team explores art and culture through boundless travelling , sparks new ideas and inspiration, and re-forge through the most advanced creativity to transform promethean and perfect artworks.

TECHNICAL ADVANTAGES

Impervious to stains and acids

It does not give off any harmful substances and is totally suitable for contact with food. NSF Certified.

Heat resistant

It does not burn in contact with fire nor does it emit smoke or toxic substances when subjected to high temperatures.

Non-absorbent

Waterproof and resistant to liquids, with an absorption level of almost zero.

Resistant, compact surfaces

Its hard surface makes it resistant to scratches and abrasion.

Easy to clean

Resistant to any kind of chemical cleaning agent such as bleach or ammonia.

Recyclable

Up to 52% of recycled content in every slab. 100% recyclable.

100% natural

It does not give off any substances that are harmful to the environment.

Lightweight

only 7kg/m² in the 3mm slab, 13.8kg/m² in the 6mm slab.

Colour-stable

Being 100% natural, its colors do not fade away when being exposed to sun light or other extreme weather conditions.

INFINITE DESIGN POSSIBILITIES

Specific solutions for various applications

CEMENT

Renewed Esthetics For Simplicity

Featuring a simplistic calm of fair-faced concrete, Cement has more artistic gloss and vein enabled by fantastic techniques processing. The detail-focused simplicity renders the space refreshingly elegant and brings out a sense of distinctive vivacity in unadorned style, which will sustain overtime.

INSTALLATION

Dry Levelling System

The dry levelling system consists in laying compact plastic sheets to compensate for any differences in the surface level. The sheets especially in the A4 size and with a thickness of 0.15mm are easily found in stationaries.

Before Installation

If while checking the substrate issues are found in the flatness of the surface, they can be corrected by spreading where necessary the plastic sheets so as to obtain a flat substrate. Once the substrate is flat proceed with the laying of the mat.

During And After Installatio

The "dry" levelling system is simple and it is also possible to correct issues regarding the flatness of the surface even AFTER has been laid.

- ① Remove the Slab.
- ② With a levelling rod or even simply a portion of a slab one can check for flatness.
- ③ Add the pastic sheets so as to compensate and flatten out the surface.
- ④ Lay back the slab.

Laying Of Silent Mat

4/1

Lay the mat starting from the corner of the space.
Cut to size.

4/2

DO NOT remove completely the protective film. The film must be removed gradually while the slabs are being laid.
Lay the slabs, using spacers to distance them from each other. The spacers will not be removed, but rather covered by the grout so be sure to push them down as far as possible.
Cut to size. Around the perimeter of the room, maintain a distance from the walls of approximately 5mm. This outer joint will then be covered by the skirting or can be filled with silicone like a normal grout line.

Grout Lines And Expansion Joints

Grout Lines

So-called "zero grout line" installation is not recommended. The minimum size of the grout lines is 2mm.
The grouting and cleaning of the surface of laminated porcelain stoneware from residues of installation materials must be carried out in parallel and always following the instructions of the grout manufacturer, so that, at the end of grouting, the tiling is finished and clean.

Intermediate, Expansion And Perimeter Joints

The use of EASY does NOT require structural and expansion joints. Meanwhile, outer joints, in correspondence with fixed elements in the bearing structure, must be placed along the perimeter of the tiling and must measure approximately 5-8 mm.
This outer joint can be covered with skirting or filled with silicone like a normal grout line.

1

In order to apply the silicone, in cartridges, a silicone gun is required. The fluidity of the silicone makes it appropriate for use with either a manual silicone gun, more common and less expensive, or an electric gun, which is certainly more convenient when filling the grout lines of a large floor.
FILLER comes in 310 ml cartridges.
To use cut the cartridge at the top of its thread. For grout lines of 2mm, it is not necessary to cut the cartridge at the top of its thread; just screw on the nozzle, insert the cartridge in the gun, and extrude.

2

Using the spray bottle, thoroughly spray the part of the grout line that is to be cleaned. Spray the rear extremity of the cartridge which will be used to pick up the excess silicone. Rest the cartridge against the grout line and scrape up the excess silicone. The excess silicone will remain inside the cartridge. Continue in this manner for the entire cleaning of the grouted area.

*IMPORTANT:

Before wiping up the excess silicone, spray the soap and water solution onto the floor area and onto the nozzle of the empty cartridge each time.
If small crests or imperfections appear in the remaining silicone, spray some of the solution onto that area and onto your fingers. Then trace over the grout line with a finger.
Also In this case, remember to first spray the soap and water solution.
When the silicone is dry, thoroughly wash the floor
Thoroughly wash and dry the floor.
The removal of the excess silicone leaves behind a significant amount of soap and water, which may look like streaks along the grout lines. A thorough washing will make the floor look perfect. Do not walk on the silicone before it is completely dry (approximately 12-18 hours, depending on the climatic conditions).

Cleaning And Maintenance

Special Cleaning Or Deep Cleaning

Clean the floor with a rough cloth soaked in lukewarm water and basic detergent for organic dirt (grease,oil foods) and caid detergent for inorganic dirt, cement and imescale. At the end of this process, rinse the floor with clean lukewarm water.

Detergents

You may use any detergent available on the market, at the prescibed concentration, with the exception of hydrofluoric (HF)acid or its compound. However, it is always advisble to test the resistance of the material on a small area first, in order to avoid alterations to the floor surface.

Grouting And Final Cleaning

Grouting And Final Cleaning

When using normal drying adhesive, grout the floor after 24-48 hours, when using rapid drying adhesives, grout after 4 hours.

When working whith polished materials in p articular, use cement grouts of a matching tone, avoiding dark color grouts with oale materials, and vice versa.

When grouting these surfaces, it is advisable not to use flexible mortars made form synthetic materials (Flexfughe), especially if the color contrasts that of thematerial, and not to use additives/latex, In factmthese products make it extremely dificult to remove any residue using normal cleaning products. If usinggrouts with contrasting or special pigments, take care to follow the information provided in the specifications adn test the grout on the material before hand.

Use a rubber-coated spatula to apply the grout over the entire surface of the material.

Grout samll areas at a time, removing excess quantitle with damp sponges or clothes (using clean water only) or specific equipment for removing excess grout, while the layer of grout is still damp.

Adequate initial cleaning is fundamental to get the best shining and to ensure cleanbilty and easy everyday maintenance. Initial cleaning should therefore beperformed immediately after laying, using acid-based products, surubbing gard and rinsing with plenty of water. This will make it posible to remove any grout, adhesive and cement residue, etc. You may use any detergent available on the market, with the sole exception of products containing hydrofluoric acid (compounds and derivatives) as provided for by standard EN 14411.

We recommend protceting the laid fooring carefully. When arrying out other operations such as painting, plumbing or other work, we recommend covering the floor with PVC sheets, airballs or fabrics once it has been laid.
