■苗木移植机 TREEDIGGER 2ZYFW-1080

苗木移植机挖掘一颗根部泥球直径为 1 米的树用时 1-3 分钟。切口锋利，切根与挖掘可同时进行，保证了切面完好和对根部最少的损坏。即使是枫树、香樟等有粗大的根系也可以简单切断，泥球表面光滑不毛，完整的泥球有助于提高移植后的成活率。随着经济飞速发展，人力成本越来越高，在特定工作环境下施工的小型挖掘机的需求不断增多。福威苗木移植机配备挖掘、破碎等可更换的辅具，一机多功能，可在不同环境下工作，大大提高了利用价值，提高工作效率的同时也节省了人力成本。

Treedigger digs a tree which ball diameter of root mud is 1 meter with 1-3 minutes. Sharp notch and cutting and mining can be done simultaneously to ensure the integrity and the least damage of the root. Even the maple and the camphor tree with large root can also be cut off, surface of mud ball is smooth and barren, the complete mud ball contributes to improving survival rate. With the rapid development of economy, the labor cost is higher and higher, the demand for mini excavators in the construction of a specific working environment is increasing.

Fuwee Treedigger equips with different replaceable assistive devices, such as mining and breaking, which has multiple functions and works in different environment, it could greatly improve the utilization value, work efficiency and labor cost.
